Description

This function is the **module** to create a new **customer**.

<https://demo.guru99.com/V4/manager/addcustomerpage.php>

When the client is trying to get a new customer we have to add a new function regarding this issue because the old module wasn't working as expected(outdated).

New customer module is going to look like:

The form is titled "Add New Customer" in a green, bold font at the top. It contains several input fields and a date picker. The fields are: Customer Name (text input), Gender (radio buttons for male and female, with male selected), Date of Birth (date picker showing mm/dd/yyyy), Address (large text area), City (text input), State (text input), PIN (text input), Mobile Number (text input), E-mail (text input), and Password (text input). At the bottom, there are two buttons: "Submit" and "Reset".

Customer Name	<input type="text"/>
Gender	<input checked="" type="radio"/> male <input type="radio"/> female
Date of Birth	<input type="text" value="mm / dd / yyyy"/>
Address	<div></div>
City	<input type="text"/>
State	<input type="text"/>
PIN	<input type="text"/>
Mobile Number	<input type="text"/>
E-mail	<input type="text"/>
Password	<input type="text"/>
<input type="button" value="Submit"/> <input type="button" value="Reset"/>	

On the left side of the webpage is the button “new customer”

This new module is going to be a form where the new customer is going to introduce his details

This new module will have the following form:

1. The first row needs to have customer details(Name+ Surname)
2. On the next row the customer will have to choose between Male and Female

3. The date of birth of the new customer
4. The address of the new customer
5. City of the new customer
6. State of the new customer
7. PIN of the new customer
8. Mobile Number of the new customer
9. E-mail of the new customer
10. The password of the new customer
11. At the end of the form, the new customer will see and will have to choose if he is going to submit his details or will reset everything
12. The new customer will see * **for mandatory fields** and he will know which fields are mandatory

The technical requirements for fields will be:

1. The customer name - numbers are not allowed, special characters are not allowed, the customer name must not be blank, and the first character cannot have space
2. Address - the address Field must not be blank, the first character can not have space, and special characters are not allowed
3. City - special characters are not allowed, the city Field must not be blank, numbers are not allowed, and the first character can not have space
4. State – numbers are not allowed, the state must not be blank, special characters are not allowed, and the first character cannot have space
5. Pin - characters are not allowed, PIN Code must not be blank, special characters are not allowed, PIN Code must have 6 Digits, the first character can not have space
6. Telephone Number - mobile no must not be blank, special characters are not allowed, characters are not allowed, the first character can not have space
7. Email -Email ID must not be blank, Email ID is not valid, the first character can not have space
